

First real QEMU boot attempt

Initial result:

Limine appeared.

Problem 1: ●

Config file had no valid entries

Fix: ●

Update Limine.conf syntax

Result: ●

NUCLEOS appeared in the Limine menu

Problem 2: ●

Limine could not open boot(7)/boot/kernel.elf

Fix: ●

Changed path to boot(7)/boot/kernel.elf.

Result: ●

Limine found the kernel

Problem 3: ●

Lower half PHDRs are not allowed

Fix: ●

Updated linker, ld to higher-half kernel

Final Result: ●

The kernel likely loads, but it has not output system yet.

Next goal:

print "Welcome to NUCLEOS"
